M. Srinivasa Rau Esquire., M.A., M.D., B. Sc., (Edin)
D. P. H., (Cantab) & F. C. S., (London.)
Sanitary Commissioner with the Government of His Highness the Maharaja of Mysore, Bangalore.

To

B. Ramaswamaiya Esq., B. A., B.L.,
Revenue *Secretary to the Government of His Highness the Maharaja of Mysore,* Department,
BANGALORE.

Sir,

With reference to Government order No. 10307-9 L. R. 228-14-6 dated the 9th. May 1916, I have the honor to submit herewith for information copies of the marginally noted correspondence on the subject of formulating definite proposals for the improvement of certain villages in the Yedatore taluk reputed to be badly affected with malaria. I gather from the Government order that the remedies accepted as tending to improve the villages are the gradual adoption of 'suitable sanitary measures' and the shifting of village sites to more healthy localities. I can only repeat, what as Dep Sanitary Commissioner I brought to the notice of th then Sanitary Commissioner in my letter dated the 27th May 1916 (copy of whcih is enclosed) that any measures proposed should be based on data such as those collecte

1. Letter dated the 27th . May 1916 from the Deputy Sanitary Comr. to the Sanitary Comr.
2. Letter No. 4991 dated the 16th. June 1916 from the Sanitary Comr to the Deputy Comr., Mysore Dist.
3. Letter No. A. C. 82 L.B/15-16 dated the 30th. March 1918 from the Deputy Comr., Mysore District, to the Sanitary Commissioner.

18

collected recently in the case of Seringapatam and that are at present being collected in connection with the sanitary improvements of the Nagar taluk. The memorandum received from the Deputy Commissioner, Mysore District, will show that the recommendations have no scientific basis. I therefore propose that a malarial survey be carried out in the affected area in the taluk and that Sub-Assistant B. Parthasrathi Iyengar who has conducted the malarial survey in Seringapatam and who is now attached to the Public Health Institute, be placed in charge thereof. In addition to his grade pay he may be given the same allowance - Rs. 30/- per mensem - which he was getting while at Seringapatam. As he has to conduct the survey in 37 villages, it may take not less than nine months for him to complete his work. He may be given the assistance of a draughtsman on Rs. 30/- per mensem and two attendants on Rs. 10 each. I request that early orders may be passed.

Seringapatam (P.H. Dept.)

I have the honor to be,

Sir,

Your most obedient servant,

~~For~~ Sanitary Commissioner
(~~absent from station~~).

Letter dated the 27th. May 1916 from the Deputy Sanitary Commissioner to the Sanitary Commissioner in Mysore.

In returning your memo. No. 4622 dated the 23rd. ay 1916 and its enclosures, I have the honor to make. the following observations.

By clearing rank vegetation in the back yards of houses and along the course of channels and by attending to drainage, it is possible to improve the health conditions of any place. Shifting villages to new sites is also desirable, wherever possible. But these measures, good as they are, do not go to the root of the matter. I would re-iterate what I said in my notes of inspection of Sanitation of Yedatore and suggest the desirability of deputing a special officer to study the whole question on the spot, in all its aspects. These are

(1) the geography, physical features and climatic conditions

(2) the geological strata characteristic of th spot

(3) the composition of the soil

(4) the level of sub-soil water

(5) the composition of water tapped in shallow and deep wells

(6) the presence or absence of rank vegetation and all grass and scrub jungle in the immediate vicinity of wet lands and villages

(7) the fauna that prevail in the rice fields&&&e when full of water

(8)the mosquitoes that are prevalent in the villages and the development of their larvae in the rice fields

(9)the & action of the fauna in the rice fields on the number of mosquito larvae

(10) the growth of weeds and grass in the channels on their banks

(11) the fauna in the channels when full of water

(12) the kind and nature of parasites in the blood of people suffering from fevers.

As Holenarasipur is not far off from Yedatore the same officer can hold a comparative investigation as to the conditions in both places. It is only when data are collected by a laborious investigation, that remedial measures can be applied to any useful purpose.

LetterNo. 4991 dated the 16th. June 1916 from the Sanitary Commissioner in Mysore to the Deputy Commissioner, Mysore District.

With reference to Government Proceedings No. R. 1030-7-9/L.R. 228-14-6 dated the 9th. May 1916 asking for definite proposals for the removal of the defects that contribute to unhealthiness in certain villages in the Yedatore Taluk, I have the honor to forward herewith an extract from the report on the results of investigation conducted by the District Health Officer in the matter together with an extract from the notes of inspection by the Deputy Sanitary & Commissioner. It will be found that certain villages in the taluk are singled out as particularly unhealthy and therefore claim the first attention for the amelioration of the insanitary conditions in them. I request you to be so good as to issue orders to the local Sanitary Inspector to visit every one of the places indicated and submit notes as to (1) the probable time it would take to root out the rank vegetation in the vicinity of dwelling houses assuming that three coolies are employed in each place for t

the work (2) the supervision necessary, (3) whether sites more desirable from a sanitary point of view are available for shifting the village and at what distance (the relative advantages to be clearly specified) and (4) nature and cost of other minor sanitary improvements, On receipt of the report I shall, if necessary, have such points in it as need verification to be examined again professionally and formulate definite proposals for submission to Government.

Letter No. A. C. 82 L.B/15-16 dated the 30th March 1918 from the Deputy Commissioner, Mysore Distt to the Sanitary Commissioner in Mysore.

I have the honor to acknowledge the receipt of your letter No. 4991 dated the 16th. June 1916 in the matter of proposals called for by Government in their proceedings No. R. 10307-9 L.R. 228-14-6 dated 9th. May 1916 for the removal of the defects that contribute to unhealthiness in certain villages in the Yedatore taluk and of the extracts forwarded therewith. As desired by you, the Sanitary Inspector of the taluk was called upon through the Amildar to collect the information asked for by you and to submit notes thereon. I have the honor to forward herewith a copy of the Sanitary Inspector's notes together with the report thereon submitted by the Amildar of the Yedatore taluk in his No. 161 dated the 3rd. March 1918. The Sanitary Inspector has dealth with 11 villages which are particularly unhealthy and which require early attention and with regard to these he has submitted notes showing the probable time that it would take to root out rank vegetation, the extent of supervision necessary, information as to shifting or extension of village site and nature and cost of minor sanitary improvements required. The Amildar, it will be seen, supports the proposals made by the Sanitary Inspector and the Sub-Division Officer in forwarding the

22

the reports has stated that "the suggestions made by the Amildar for remedying the unhealthiness of the villages selected seem to be generally suitable and may be forwarded to the Sanitary Commissioner for further action".

I have the honor, therefore, to request that the suggestions may be further scrutinised by you and definite proposals formulated.

"Copies"

M Srinivasan

For Sanitary Commissioner

Report on the relation of rice cultivation to the prevalence of malaria in the channel irrigation tracts of Yedatore Taluk in the Mysore District.

X X X X X X

Applying the principle that where the average spleen rate amongst children does not exceed 10 per cent a locality is -- considered as healthy where it is between 10 and 25 per cent moderately endemic: where between 25 and 50 per cent highly - endemic; and where above 50 per cent hyperendemic. The 37 places consisting of 2 towns, 32 villages and 3 koppals or hamlet reported to be under cultivation in the ~~list~~ list furnished by the Taluk Office have been classified in the order of scarcity of infection as under:---

Healthy--- (1)Balur (2)Abbur (3)Doddakoppal (4)Kaggala(5) Geligekere (6)Hanasoge.

Moderately endemic:- (1) Sakkere (2)Karthal (3)Hyadya (4) Arjunahalli (5)Gandhanahalli (6)Tippur, (7)Mirle (8)Saligram (9) Hampapura (10) Kanchankere (11) Nahanhalli (12)Dommanhalli (13) Mudalakoppal

Highly endemic --- (1)Sabalu (2)Kaggare (3)Kanaganahalli, (5) Manchenahalli (6)Chendagal (7)Sanyasipura, (8)Doddavaddaragudi (9)Chivaddaragudi (10) Karagahalli kippal (11) Hosa -- Agrahar (12) Yedatore (13) Badakana kippal.

Hyper-endemic ---- (1) Bommenhalli (2)Kahosalu (3)Thandre (4) Goragundi (5)Beechanahalli

Even in badly infected places infants and very young children have seldom been found to be affected. This may perhaps be due to the fact of their being mostly by the kitchen side in the mother's company and sleeping in ~~xxx~~ smoked room not conducive to the existence of anaphelines. It was in -- children of advanced stage spending time mostly out-doors and sleeping in open that enlargements of spleen of all degrees were invariably seen. Again in houses in immediate vicinity of irrigated lands comparatively more and worse cases of enlargements were noted than in those remotely situated.

Notes of inspection of sanitation in Yedatore Taluk by the -- Deputy Sanitary Commissioner in Mysore.

X X X X X X X

There are three main streets in Yedatore. The middle or Bazaar s treet has the largest number of ~~xxxxxxxxxxxxxxx xxxxxx~~ inhabited houses. In the streets to the north and south of the Bazar street, 40 and 50 per cent of the houses are in a dilapidated condition, respectively. The backyards of all houses are full of rank vegetation. To the south of Ramnathpur road, there is a channel with a little running water and having rank vegetation on its banks, forming admissible breeding ground for Anophelinae and other musquitoes. The street on the bank of the Cauveri is liable to be inundated when the river is in floods. The houses are all bound to be damp for over 6 months in the year. The town is surrounded on 3 sides by fields under wet cultivation.

X X X X X X X

An extension was formed about 10 years ago, in a locality --- which is about ¾ of a mile to the east of the town. There are about 20 houses and a rice-mill in this extension. The extension however is proposed to be abandoned as the new channel which is expected to be ready soon, will bring the surrounding fields under wet cultivation. Therefore another extension is projected on an elevated site about 2½ miles to the south of the old town, on the Hunsur Road. The P.W. Office and ~~xxxxx~~ quarters for officials have already been built. Three wells have been sunk and 8 more will be taken up according to requirements. This is an excellent site, the only possible objection to it being its distance from the old town. The families living here are keeping very good health. This southern extension is well above the new channel and within a mile of it there will be no wet cultivation.

X X X X X X X

Of the 37 villages round about which, there is extensive

wet cultivation, I have visited 15 including Yedatore itself. The only places which can be really unhealthy are Yedatore and Katnul. As regards the latter, the village can easily be shifted to the new site selected for it, and where a number of houses have already sprung up. The distance is not very great and a liberal supply of building materials will induce the villagers to construct new houses for themselves. As regards Yedatore itself, the question does not admit of such an easy solution. Whether wet cultivation round the town has anything to do with the depopulation can be determined only after a study of various points. Within a radus of 5 miles from Yedatore as centre, there are the following villages:- (1)Katnalu (2)Goragundi (3)Kaggare (4)Kamenhalli (5) Manchenhalli (6)---Cheendagal (7) Sanyasipura (8) Tippur (9) Hampapura (10)Mudlakoppal and (11) Kanaganahalli. Mr. B.Krishna Rao in his report sent to the Government in July 1915, has classified these in the following manner:--

1. Katnalu and Goragundi as Hypernendemic where the spleen rate among children exceeds 50 %

2. Kaggere, Kanaganahalli, Kamenhalli, Manchenhalli, Chandagal, Sanyas-ipura and Yedatore as highly endemic where the spleen rate averages between 25 and 50 per cent.

3. Tippur, Hampapur and Mudlakoppal, as moderately endemic where the spleen rate averages between 10 and 25%

There are also said to be no "healthy" villages within 5 miles of Yedatore, where the spleen-rate is less than 10 per cent. Within the short time at my disposal, I could not examine as many children as Mr. KrishnaRao was able to do but judging from my own investigations, I think that Katnalu and Yedatore are the only 2 places which may be said to be Hyperendemic and highly endemic respectively. Goragundi is certainly not Hyperendemic. Excluding Tippur, Kanaganahalli and Kamenhalli which I could not visit for lack of time, I am of opinion that the other 6 villages are healthy.

Round about Mirle, there are (1) Hosagrahar, (2) Arjunhalli (3) Chikvadiagudi, (4)Beechanahalli and (5) Balur. Of the Balur alone is considered "healthy" while Mirle and Arjunhalli are classed as moderately endemic, Hosagrahar and Chikvadiagudi as highly endemic and Beechanahalli a Hyperendemic. I agree with Mr. B.Krishna Rao that Balur is healthy but consider that the other 5 villagesalso deserve to be classed " healthy" The common factor is all these 15 villages, is the presence of channel or river with the concomitant wet cultivation. Of these, I consider 12 villages to be fairly healthy and the other two Yedatore and Katnalu as unhealthy. As the conditions are widely diffeent in the severel places, it is impossible for any body to decree on the ques-tion at issue

X X X X X X X

Copy of report No. 161 from the Amildar Yedatore Taluk.

Reference :--- Mysore Sub Division Officer's order No. 62 dated 29-7-1916.

Report submitted.

In the correspondence received with the above order (--- herewith returned) the villages which are singled out for special treatment are :-- 1. Katnal 2. Goragundi 3. Kaggere 4. Ramenahalli 5. Manchanahalli 6. Chandagal 7. Sanyasapura 8. Tippur 9. Hampapur 10. Mudalkoppalu 11. Kunaganahalli 12. Yedatore Town.

2. The statement prepared by the Sanitary Inspector giving details of measures required to remove unhealthiness in these towns is herein enclosed for kind perusal and I beg to add my remarks against each of these villages as follows:--

1. Katnal:-- The villagers have almost abandoned the old village site referred to in the enclosed correspondence, and they have shifted themselves to S. No. 12 to the west of the old village site, and I have already submitted my report recommending the acquisition of S. No. 12 where the villagers have already built some houses, as also survey No. 13 and also portions of survey Nos. 35, 22 and 21. These are on much higher level and have not much rank vegetation near them

2. Goragundi:--- This is close to Yedatore Town. The removal of vegetation around the village may be left to the village committees. Shifting of village appears necessary and S. Nos. 4&5 appear suitable for extension.

3. Kaggare:- This is also close to Yedatore town, much healthier than Yedatore itself. Filling up ruts and formation of drains is what is wanted for this village. This is the work of the village improvement committees.

4. Kamenahalli:-- Drainage to be improved.

5. Manchanahalli:-- This is a union. The old village should be abandoned. S. Nos. 305 & 200 have been selected for shifting the village. The acquisition records have been completed and submitted to the Sub Division Officer for awarding com-

pensation to the holders concerned.

6. Chendagal:--- This is a union. No special work is needed for this village, as funds are allotted every year from the Local Funds towards the improvement of Drainage and roads. There is also a village improvement committe here, which is exerting towards the improvement of the sanitation.

7. Sanyasapur:-- No convenient site is found for extension The village may remain as it is, drains are needed.

8. Thippur:-- This is a Union. There is also village improvement committee. Pits around the village are to be filled. Rank vegetation in vacant sites should be removed and funds from the local funds are allotted every year towards the improvement of the village.

9. Hampapur:-- This is a union. No special work is needed for this village, as funds from the Local Funds are allotted every year for repairing roads and drains in the village.

10. Kanaganahally:--- The shifting of the village is under correspondence.

11. Mudalkoppal:-- This village also is to be shifted. S. No. 26 is proposed for extension and the matter is under correspondence.

12. Yedatore Town:--- Much of the rank vegetation has since been removed. The whole town should be removed to the proposed new extensions as early as possible.

3. The clearance of rank vegetation in, and around these villages to a distance of about 100 yards all round the villages should be left to the village improvement committees -- themselves and this work, I think should be got through under the direct supervision of the Sanitary Inspector, who should make it his business to visit every one of these villages and get this work done by the villagers and see that the work is completed before he leaves the village.

4. I would also beg to propose the prohibition of the granting of new lands for wet cultivation within a radius of 2 furlongs all round these villages.

5. I regret very much for the delay in submitting this report . The Local Fund clerk to whom this reference had been referred, have shelved this reference for about a year without bringing it to my notice. He has taken one year to pass it on to the sanitary inspector . The Sanitary Inspector also, failed to attend to this promptly. I have fined the local fund clerk 8 annas for having delayed this reference so long.

The entire correspondence on the subject is herewith returned.

Statement showing the number of villages in Yedatore Taluk where sanitay measures are to be taken to prevent unhealthiness &c.

No.	Name of village	Probable time to root out rank vegetation in the village at the rate of 3 coolies per day.	Supervision necessary.	Whether sitesmore desirable from a sanitary point of view on available for shifting the village and at what distance	Nature and cost of other sanitary improvments.
1.	Sanyasipur	Ten days	No special supervision is necessary the local Sanitary Inspector will look after this work in addition to his legitimate duties.	Shifting of the village is not necessary and the villagers too are not for it.	Excavating drains in the village and constructing one tunnel are necessary Cost Rs. 75.
2.	Hampapur	One month		Shifting of the village is unnecessary New houses are being built in the extension	As this is a Union every year a certain allotment is set apart for roads and drains. Hence no special work is needed.
3.	Hanchanahally	20 days		S.Nos 305 & 200 have been selected for shifting the village and orders to build houses are to be issued early. 1 Fur.	Deepening the old check drain and constructing new drain below the channel to prevent percolation of water and roads and drains in the extension. Cost Rs.600
4.	Goragundi.	Ten days.		Shifting of the village is not necessary. Extension of the village is needed and S.Nos.4 & 5 may be selected.	Roads and drains in the village and 3 tunnels are required at a cost of Rs.200

5.	Kaggare	Ten days.	Shifting of the village is unnecessary.	Filling up pits and excavating drains and forming roads Cost.Rs. 200
6	Kamenhally	Fifteen days	---do---	Constructing drains and tunnels and forming roads. Cost Rs.150
7.	Kanaganhally	Ten days.	S.Nos.43-46-47 have been selceeted for shifting the village. and is under correspondence	Excavating drains, constructing tunnels an d forming roads in the new extension Cost Rs. 200
8.	Thippur	One month	Shifting of the village is not necessary.	For filling up pits a sum of Rs.300 is required.
9.	Mudlakoppalu	One week	S.No.36 has been chosen and approved by the District Sanitary Officer for the new village.	Two wells at a cost of Rs.500 each and one road bridge over the channel are very necessary to shift the village.
10	Katnal	One week	Shifting of the village is quite necessary and S.Nos.12 & 13 have been chosen for the same. The villagers_wein_poor require Government help in the shape of supplying them with timber &c.	For excavating drain constructing tunnels and forming roads in the proposed extension, a sum of Rs. 400 is required
11.	Chandagal	Ten days	Shifting of the village is not necessary Extension in S.No.22 is proposed to build a few houses.	Being a Union every year a certain amount is spent for roads and drains No special work is

P. Raghavendra Rao, Esq., B.A., B.L.,
Revenue Commissioner in Mysore.

To

The Secretary to the Government of
His Highness the Maharaja of Mysore,
Revenue *Department.*

SIR,

Adverting to correspondence ending with Government Order, No.R.10307-9/L.R.228-14-6 dated 9th May 1916, regarding the prohibition of wet cultivation round about the villages in Yadatore Taluk, I have the honor to forward herewith, copy of letter No.A.C.82 L.B dated 2nd April 1918, and its enclosures in original (for perusal and kind return) from the Deputy Commissioner, Mysore District, reporting that the matter has been investigated and that the connected papers have been forwarded to the Sanitary Commissioner for formulating definite proposals. I agree with the Deputy Commissioner in thinking that no further action seems necessary till the Sanitary Commissioner's proposals are received.

I have the honor to be,

Sir,

Your most obedient servant,

P Raghavendra Rao
16.5.18

Revenue Commissioner.

T.B.M.

Letter No.A.C.82 L.B. dated 2nd April 1918 from the Deputy Commissioner, Mysore District, to the Revenue Commissioner in Mysore.

With reference to your docket No.15616 dated 23rd May 1916, calling for definite proposals in the matter of shifting of village sites and adoption of sanitary measures to remedy the unhealthy conditions in certain villages in the Yedatore Taluk as desired in Government Proceedings No.R.10307-9/L.R.228-14-5 dated 9th May 1916, I have the honor to state that the Sanitary Commissioner in his letter No.4991 dated 17th June 1916 forwarded extracts from the report on the results of the District Health Officer's investigations in the matter and of the notes of inspection of the Deputy Commissioner. From these extracts it was apparent that certain villages in the taluk were condemned as unhealthy. The Sanitary Commissioner therefore desired that orders may be issued to the local Sanitary Inspector to visit all the places indicated and submit notes on certain points given by him. The Sanitary Inspector's notes in respect of the 11 villages specially condemned as unhealthy have been received with the Amildar's remarks thereon and forwarded to the Sanitary Commissioner as desired by him for formulating definite proposals. Before any further action can be taken it seems necessary to await the proposals that may be formulated by the Sanitary Commissioner. A copy of the Sanitary Commissioner's letter No.4991 of the 17th June 1916 and of the two extracts sent therewith as well as copies of the Sanitary Inspector's notes and the Amildar's remarks thereon which has been forwarded to the Sanitary Commissioner are herewith sent for information.

" C O P Y "

For Revenue Commissioner.

T.B.M.

Copy of letter No.4991 dated 16/17th June 1916 from the Sanitary Commissioner in Mysore to the Deputy Commissioner, Mysore District.

With reference to Government Proceedings No.R.1030-7-9/L.R. 228-14-6 dated the 9th May 1916 asking for definite proposals for the removal of the defects that contribute to unhealthiness in certain villages in the Yedatore Taluk, I have the honor to forward herewith an extract from the report on the results of investigation conducted by the District Health Officer in the matter together with an extract from the notes of inspection by the Deputy Sanitary Commissioner. It will be found that certain villages in the taluk are singled out as particularly unhealthy xxxx and therefore claim the first attention for the amelioration of the insanitary conditions in them. I request you to be so good as to issue orders to the local Sanitary Inspector to visit every one of the places indicated and submit notes as to (1) the probable time it would take to root o t the rank vegation in the vicinity of dwelling houses assuming that three coolies are employed in each place for the work (2) the supervision necessary (3) whether sites more desirable from a sanitary point of view are available for shifting the village and at what distance (the relative advantages to be clearly specified) and (4) nature and cost of ---- other minor sanitary improvements. On receipt of the report I shall if necessary, have such points in it as need verification to be examined again professionally and formulate definite proposals for submission to Government.

Mysore Dist

Report on the relation of rice cultivation to the prevalence of malaria in the channel irrigation tracts of Yedatore Taluk in the Mysore District.

X X X X X X

Applying the principle that where the average spleen rate amongst children does not exceed 10 per cent a locality is -- considered as healthy where it is between 10 and 25 per cent moderately endemic: where between 25 and 50 per cent highly - endemic; and where above 50 per cent hyperendemic. The 37 places consisting of 2 towns, 32 villages and 3 koppals or hamlets reported to be under cultivation in the ~~list~~ list furnished by the Taluk Office have been classified in the order of scarcity of infection as under:---

Healthy--- (1)Balur (2)Abbur (3)Doddakoppal (4)Naggara(5) Galigekere (6)Hanasoge

Moderately endemic:- (1) Sakkere (2)Karthal (3)Hyadya (4) Arjunahalli (5)Gandhanahalli (6)Tippur, (7)Mirle (8)Saligram (9) Hampapura (10) Kanchankere (11) Nahanhalli (12)Dommanhalli (13) Mudalakoppal

Highly endemic --- (1)Sabalu (2)Kaggare (3)Kanaganahalli (5) Manchenahalli (6)Chendagal (7)Sanyasipura, (8)Doddavaddaragudi (9)Chivaddaragudi (10) Karagahalli kippal (11) Hosa -- Agrahar (12) Yedatore (13) Badakana kippal.

Hyper-endemic ---- (1) Bommenhalli (2)Kahosalu (3)Thandre (4) Goragundi (5)Beechanahalli

Even in badly infected places infants and very young children have seldom been found to be affected. This may perhaps be due to the fact of their being mostly by the kitchen side in the mother's company and sleeping in ~~xxx~~ smoked rooms not conducive to the existence of anaphelines. It was in -- children of advanced stage spending time mostly out-doors and sleeping in open that enlargements of spleen of all degrees were invariably seen. Again in houses in immediate vicinity of irrigated lands comparatively more and worse cases of enlargements were ~~noted~~ noticed than in those remotely situated.

copy

Notes of inspection of sanitation in Yedatore Taluk by the -- Deputy Sanitary Commissioner in Mysore.

X X X X X X X

There are three main streets in Yedatore. The middle or Bazaar street has the largest number of ~~xxxxxxxxxxxxxxx xxxxxx~~ inhabited houses. In the streets to the north and south of the Bazar street, 40 and 50 per cent of the houses are in a dilapidated condition, respectively. The backyards of all houses are full of rank vegetation. To the south of Ramnathpur road, there is a channel with a little running water and having rank vegetation on its banks, forming admissible breeding ground for Anophelinae and other musquitoes. The street on the bank of the Cauveri is liable to be inundated when the river is in floods. The houses are all bound to be damp for over 6 months in the year. The town is surrounded on 3 sides by fields under wet cultivation.

X X X X X X X

An extension was formed about 10 years ago, in a locality --- which is about ¾ of a mile to the east of the town. There are about 20 houses and a rice-mill in this extension. The extension however is proposed to be abandoned as the new channel which is expected to be ready soon, will bring the surrounding fields under wet cultivation. Therefore another extension is projected on an elevated site about 2½ miles to the south of the old town, on the Hunsur Road. The P. W. Office and ~~xxxxxx~~ quarters for officials have already been built. Three wells have been sunk and 8 more will be taken up according to requirements. This is an excellent site, the only possible objection to it being its distance from the old town. The families living here are keeping very good health. This southern extension is well above the new channel and within a mile of it there will be no wet cultivation.

X X X X X X X

Of the 37 villages round about which, there is extensive

wet cultivation, I have visited 15 including Yedatore itself. The only places which can be really unhealthy are Yedatore and Katnul. As regards the latter, the village can easily be shifted to the new site selected for it and where a number of houses have already sprung up. The distance is not very great and a liberal supply of buidling materials will induce the villagers to construct new houses for themselves. As regards Yedatore itself, the question does not admit of an easy solution. Whether wet cultivation round the town has anything to do with the depopulation can be determined only after a study of various points. Within a radus of 5 miles from Yedatore as centre, there are the following villages:- (1)Katnalu (2)Goragundi (3)Kaggare (4)Kamenhalli (5) Manchenhalli (6)Chendagal (7) Sanyasipura (8) Tippur (9) Hampapura (10)Mudlakoppal and (11) Kanaganahalli. Mr. B.Krishna Rao in his report sent to the Government in July 1915, has classified these in the following manner:--

1. Katnalu and Goragundi as Hypernendemic where the spleen rate among children exceeds 50 %

2. Kaggere, Kanaganahalli, Kamenhalli, Manchenhalli, Chandagal; Sanyassipura and Yedatore as highly endemic where the spleen rate averages between 25 and 50 per cent.

Tippur, Hampapur and Mudlakoppal as moderately endemic where the spleen rate averages between 10 and 25%

There are also said to be no "healthy" villages within 5 miles of Yedatore, where the spleen-rate is less than 10 per cent. Within the short time at my disposal, I could not examine as many children as Mr. Krishnaa Rao was able to do but judging from my own investigations, I think that Katnalu and Yedatore are the only 2 places which may be said to be Hyperendemic and highly endemic respectively. Goragundi is certainly not Hyperendemic. Excluding Tippur, Kanaganahalli and Kamenhalli which I could not visit for lack of time, I am of opinion that the other 6 villages are healthy.

Round about Mirle, there are (1) Hosagrahar, (2) Arjunhalli (3) Chikvadiagudi, (4)Beechanahalli and (5) Balur. Of-the Balur alone is considered "healthy" while Mirle and Arjunhalli are classed as moderately endemic, Hosagrahar and Chikvadiagudi as highly endemic and Beechanahalli a Hyperendemic. I agree with Mr. B.Krishna Rao that Balur is healthy but consider that the other 5 villagesalso deserve to be classed "as healthy" The common factor is all these 15 villages, is the presence of channel or river with the concomitant wet cultivation. Of these, I consider 12 villages to be fairly healthy and the other two Yedatore'and Katnalu as unhealthy. As the conditions are widely diffeent in the several places, it is impossible for any body to dogmatise on the ques-tion at issue

Malaria Commissioner

Mysore Govt.

Copy of report No.161 from the Amildar Yedatore Taluk

Reference :--- Mysore Sub Division Officer's order No/62 dated 29-7-1916.

Report submitted.

In the correspondence received with the above order (--- herewith returned) the villages which are singled out for special treatment are :-- 1.Katnal 2. Goragundi 3. Kaggere 4. Kamenahalli 5. Manchanahalli 6. Chandagal 7. Sanyasapura 8. Tippur 9. Hampapur 10.Mudalkoppalu 11.Kunaganahalli 12.Yedatore Town.

2. The statement prepared by the Sanitary Inspector giving details of measures required to remove unhealthiness in these towns is herein enclosed for kind perusal and I beg to add my remarks against each of these villages as follows:--

1. Katnal:-- The villagers have almost abandoned the old village site referred to in the enclosed correspondence, and they have shifted themselves to S.No.12 to the west of the old village site, and I have already submitted my report recommending the acquisition of S.No.12 where the villagers have already built some houses, as also survey No.13 and also portions of survey Nos. 35,22 and 21. These are on much higher level and have not much rank vegetation near them

2. Goragundi:--- This is close to Yedatore Town. The removal of vegetation around the village may be left to the village committees. Shifting of village appears necessary and S.Nos.4&5 appear suitable for extension.

3. Kaggare:-- This is also close to Yedatore town. Much healthier than Yedatore itself. Filling up ruts and formation of drains is what is wanted for this village. This is the work of the village Improvement committees.

4. Kamenahalli:-- Drainage to be improved.

5. Manchanahalli:-- This is a union. The old village should be abandoned. S. Nos. 305 & 200 have been selected for shifting the village. The acquisition records have been completed and submitted to the Sub Division Officer for awarding com-

pensation to the holders concerned.

6. Chendagal:--- This is a union. No special work is needed for this village, as funds are allotted every year from the Local Funds towards the improvement of Drainage and roads. There is also a village improvement committe here, which is exerting towards the improvement of the sanitation.

7. Sanyasapur:-- No conveneient site is found for extension The village may remain as it is, drains are needed.

8. Thippur:-- This is a Union. There is also village improvement committee. Pits around the village are to be filled. Rank vegetation in vacant sites should be revomed and funds from the local funds are allotted every year towards the improvemen of the village.

9. Hampapur:-- This is a union. No special work is needed for this village, as funds from the Local Funds are allotted every year for repairing roads and drains in the village.

10. Kanaganahally:--- The shifting of the village is under correspondence.

11. Mudalkoppal:-- This village also is to be shifted. S.No. 36 is proposed for extension and the matter is under correspondence.

12. Yedatore Town:--- Much of the rank vegetation has since been removed. The whole town should be removed to the proposed new extensions as early as possible.

3. The clearance of rank vegetation in, and around these villages to a distance of about 100 yards all round the villages should be left to the village improvement committees themselves and this work, I think should be got through under the direct supervision of the Sanitary Inspector, who should make it his business to visit every one of these villages and get this work done by the villagers and see that the work is completed before he leaves the village.

4. I would also beg to propose the prohibition of the granting of new lands for wet cultivation within a radius of 2 furlongs all round these villages.

5. I regret very much for the delay in submitting this report . The Local Fund clerk to whom this reference had been referred, have shelved this reference for about a year without bringing it to my notice. He has taken one year to pass it on to the sanitary inspector . The Sanitary Inspector also, failed to attend to this promptly. I have fined the local fund clerk 8 annas for having delayed this reference so long.

The entire correspondence on the subject is herewith returned.

Sir,

In continuation of my letter No. G.C.14-4, dated the 20th July 1918, I have the honor to submit herewith copy of letter No. A.Dis 44/L.B dated the 4th instant from the President, District Board, Mysore, stating that the Board do not consider it necessary to incur the expenditure proposed for a malarial survey of certain villages in the Yedatore taluk. It will be seen that the Board adduce no reasons for their view nor do they suggest the measures which in their opinion are likely to ameliorate the health condition of the villages other than those based upon a scientific investigation of the kind proposed by me. In my opinion the cost of the malarial survey is a legitimate charge on the District Board Funds. But as the Board refuses to undertake the expense I can only suggest that the cost of the survey may be met from the provision made in the current years State Budget under "Grants - in - aid to Local funds for Village Improvements".
